INSITE GIS

A Robust Geographic Information System, Integrated Into Your Website

Developed specifically for community marketers and integrated seamlessly with our other products, Atlas InSite GIS allows your team to showcase available properties, local companies and community amenities in just a few clicks. InSite is available in a commercial property option (Atlas InSite) and a residential property option (Atlas Enlist).

Unlike other systems on the market, Atlas InSite GIS is integrated directly into your website and managed by the same tool set. We built it that way because integrated solutions get 300% more traffic than non-integrated solutions.

Atlas InSite GIS is web-based and browser accessed. It is optimized for the fastest loading times possible. And all of your changes are made in a simple interface and published in real time.

	STANDARD FEATURES
✓	**Searchable property, company, attraction and community databases seamlessly integrated into your website**
✓	**A dynamic color-coded map legend that differentiates office, residential, industrial and land entries**

ATLAS
